

Tracking Watch and Monitoring System

Lexiwave's tracking watch uses a fusion of tracking technologies, i.e., GPS, WiFi, cellular, and BLE, to determine the precise location of a person to whom it is attached. The watch comes with rich safety monitoring features: heart rate monitoring, body temperature, fall detection, and no motion detection.

Customized Webportal for particular needs

The screenshot shows a web-based monitoring interface. At the top, there is a navigation bar with links: Device Manager, Track Play, Report, Geo-fence, Settings, and Logout. Below the navigation bar, a table lists 10 devices, each with a 'View' button. The columns are: Device, Type, Time, Lat, Lon, and Map. The table shows 10 entries for 'Device 2' of type 'CELL'. Below the table is a map of Hong Kong with a red dot indicating the location '7 Science Park West Avenue, Science Park, Hong Kong'. A zoomed-in view of the map shows the surrounding area with labels like 'North District Park', 'Futian', 'Tai Po', 'Ma On Shan', 'Sai Kung', and 'Kwai Tsing'. A legend at the top right of the map area shows 'Location' and 'Map/Satellite' options.

Device	Type	Time	Lat	Lon	Map
Device 2	CELL	00:00:31 2013/07/31	22.4940094	114.1375753	View
Device 2	CELL	00:00:49 01/01/1970	22.4239579	114.2101789	View

Applications

GPS Tracking Platform

Senior

Children

Construction Worker

Features

Advanced tracking technology

The watch is equipped with advanced localization technology, i.e., GPS, WiFi, cellular, and BLE, to find the location precisely in indoor and outdoor environments.

Live online monitoring

Operators can monitor the location and condition of the user through our user-friendly monitoring web portal. In case of alerts, instant indications will be provided on screen. Optional email or SMS notifications can be sent out.

Alerts

Fall detection, as well as over/under heart rate and body temperature monitoring, makes it particularly suitable for construction workers and the elderly.

Unique feature

The watch seamlessly monitors heart rate and detects falls simultaneously, making it a standout product in the market that prioritizes user safety. With our advanced AI model, it provides precise fall detection while minimizing false alerts.
